

Zscaler Unveils AI-Powered Analytics Across Cyber Risk, Digital Experience, SaaS Usage, and Workplace Trends

December 12, 2023

AI-Powered Extensions Advance the Business Analytics Portfolio; New Business Insights Identifies Redundancies, Eliminates Wasteful Spending, and Optimizes Location Usage for Maximum Efficiency and Performance

SAN JOSE, Calif., Dec. 12, 2023 (GLOBE NEWSWIRE) -- [Zscaler, Inc.](#) (NASDAQ: ZS), the leader in cloud security, announced the availability of Business Insights, a new addition to its Business Analytics portfolio, which enables organizations to curtail SaaS sprawl and optimize office usage to improve workplace experience while saving money. Additionally, Zscaler unveiled several enhancements to its wider Business Analytics portfolio that include new AI-powered innovations within its Zscaler Risk360™ and Zscaler Digital Experience Monitoring™ (ZDX) product offerings. These solutions leverage the world's largest security cloud, the Zscaler Zero Trust Exchange™, which sees more than 370 billion transactions and 500 trillion signals daily, and is now being used to train the world's most powerful AI/ML security engines.

"IT leaders overseeing distributed organizations are constantly challenged to control costs while at the same time improving productivity and reducing risk exposure," said Patrick Foxhoven, Chief Innovation Officer and Executive Vice President, Zscaler. "However, point products are unable to provide sufficient insights to support distributed workplaces with proliferating applications and employees working from anywhere. Siloed data from disparate systems create blind spots in areas like cyber risk, digital experience, application usage and workplace trends. Customers turn to Zscaler for the first-party data powered by the Zscaler Zero Trust Exchange platform to empower application, network, and security transformation."

With Zscaler Business Analytics, IT leaders can improve employee experience, reduce cyber risk, and optimize SaaS spend and office utilization, all with their current Zscaler deployment. These valuable insights will help drive down costs while keeping organizations secure and productive.

"With Risk360, we are able to gain visibility into cyber risk blind spots," said Darin Hurd, CISO, Guaranteed Rate. "This visibility lets us be more focused on where we spend our time so we address and reduce the most pressing cyber risks."

New Zscaler Business Insights enables organizations to:

- Assess and manage SaaS utilization, including shadow IT, to identify redundant or unused applications, and reduce license costs.
- Visualize office use across all locations globally to understand workplace trends including days and times offices are being used, departmental usage, over-capacity and under-capacity issues, and opportunities for consolidation and cost savings.

Advancements to Zscaler Risk360 allow IT teams to:

- Download cybersecurity maturity assessments powered by Zscaler's generative AI, which includes custom in-house developed Large Language Models (LLMs).
- More effectively leverage data from third parties, like CrowdStrike, to identify additional risk signals and reduce the potential for compromise on user devices.
- Access new financial risk models that include Monte Carlo simulation outcomes showing distributions of possible financial scenarios tied to cyber risk.
- Assist SEC reporting with features that can enhance compliance with new SEC disclosure requirements.

"We're excited about how rapidly Zscaler is developing Risk360, including adding features like generative AI reporting," said Manesh Patel, CIO, Sanmina Corporation. "It's great to see Zscaler leaning into its unique architectural advantage - the data - to help solve business challenges for organizations like ours."

Recent Enhancements to ZDX provide IT leaders with the ability to:

- Deploy AI-powered root cause analysis to help service desk analysts expedite triage and resolution in seconds without requiring deep IT skills.
- Reduce IT ticket volumes by empowering end users to fix local issues with AI-driven self-service notifications and resolution steps.
- Proactively monitor and optimize performance before users are impacted with an AI-based Incident Dashboard to detect, analyze, and provide root cause for issues impacting multiple users.
- Simplify collaboration between service desk and network teams by sharing ZDX Snapshots with detailed root cause analysis and reduce mean time to resolution.

Forward-Looking Statements

This press release contains forward-looking statements that are based on our management's beliefs and assumptions and on information currently available to our management. These forward-looking statements include the expected impact of Zscaler's platform development, the ability of our

customers to reduce risk and the potential optimization of costs for our customers. These forward-looking statements are subject to the safe harbor provisions created by the Private Securities Litigation Reform Act of 1995. A significant number of factors could cause actual results to differ materially from statements made in this press release.

Additional risks and uncertainties are set forth in our most recent Annual Report on Form 10-Q filed with the Securities and Exchange Commission ("SEC") on March 8, 2023, which is available on our website at ir.zscaler.com and on the SEC's website at www.sec.gov. Any forward-looking statements in this release are based on the limited information currently available to Zscaler as of the date hereof, which is subject to change, and Zscaler will not necessarily update the information, even if new information becomes available in the future.

About Zscaler

Zscaler (NASDAQ: ZS) accelerates digital transformation so customers can be more agile, efficient, resilient, and secure. The Zscaler Zero Trust Exchange™ platform protects thousands of customers from cyberattacks and data loss by securely connecting users, devices, and applications in any location. Distributed across more than 150 data centers globally, the SSE-based Zero Trust Exchange™ is the world's largest in-line cloud security platform.

Zscaler™ and the other trademarks listed at <https://www.zscaler.com/legal/trademarks> are either (i) registered trademarks or service marks or (ii) trademarks or service marks of Zscaler, Inc. in the United States and/or other countries.
