

Zscaler Achieves Certification to Secure Global Customers Connecting in China

July 1, 2026

Zscaler has obtained the China Network Security Specialized Product Security Testing Certificate (网络安全专用产品安全检测证书). The certification confirms that multinational organizations with operations in China can use Zscaler's Zero Trust Exchange (ZTE) Platform and comply with **GB 42250-2022**, China's national standard for *Information Security Technology: Security Technical Requirements for Cybersecurity Dedicated Products*.

What This Means and Why It Matters for Our Customers

GB 42250-2022 sets the technical security baseline for cybersecurity products operating in the China market. For multinational organizations operating in, or connecting to, mainland China, regulatory compliance is a top priority. This certification provides our customers with added confidence that Zscaler's platform aligns with China's cybersecurity regulatory framework, including the requirements under the Cybersecurity Law of the People's Republic of China.

Combined with Zscaler's existing China Premium Access and China Premium Access Plus offerings, achieving this milestone reinforces our commitment to helping global enterprises operate securely and compliantly in one of the world's most dynamic markets.

About Zscaler's Global Compliance

Zscaler is the most accredited cloud security platform in the world, holding certifications including ISO 27001, ISO 22301, SOC 2, CSA STAR, and many others. This latest achievement further extends Zscaler's compliance portfolio supporting customers operating in China.
