The Fed100 awards recognize senior executives from government and industry who have made a positive impact on the way information technology is used to advance government missions.

Throughout his career, Kovac has worked to remove roadblocks to Federal cloud adoption, collaborating with agency leaders to strengthen cloud security since TIC and FedRAMP efforts were first launched. In 2019, he advocated for the successfully updated TIC 3.0 policy, and worked with an industry/government task force to publish a zero trust report to evaluate the technical maturity of zero trust technologies and services with the potential for agency adoption.

In 2019, under Kovac's leadership, Zscaler launched the first cloud-based, FedRAMP TIC 3.0 solution to allow agencies to create fast, secure connections between users and applications, regardless of device, location, or network. Most recently, Zscaler has achieved FedRAMP Ready status at the High Impact level for its zero trust access solution and was the first FedRAMP Authorized Secure Internet and Web Gateway provider.

"The Federal 100 Awards are the most prestigious in federal IT. On behalf of the Zscaler team, congratulations to Stephen Kovac and all the government and industry Fed100 recipients who go above and beyond every day to support Federal missions," said Jay Chaudhry, Chairman and CEO of Zscaler. "Stephen's work has benefited Zscaler customers by making it easier to securely use modern cloud applications and achieve digital transformation goals. His efforts have also helped to strengthen cloud security across the federal government."
